Electrical installation instructions

Obelux LI SAL Series have two cable glands for easy chaining without external distribution boxes. Connection can be protected with a 6A or 10A fuse or with a circuit breaker (C curve: C6A or C10A).

Configuring Obelux LI SAL Series

Photocell mode (enabled/disabled) and threshold (400 lux, 800 lux or 1600 lux) can be selected by the user using DIP configuration switches. Open three screws on the bottom of Obelux light to gain access to DIP switches. We recommend using a socket wrench but the screws can also be opened with a suitable flat-head screwdriver. Holding the aviation obstacle light glass dome pointing upwards, the individual DIP switches are numbered 1-4 from left to right.

3. Block diagram of Obelux LI stand-alone light.

DIP Switch Settings–Photocell mode			DIP Switch Settings–Flash mode		
1	2	Operating mode	3	4	Operating mode
OFF	OFF	Photocell disabled	OFF	OFF	Steady-burning i.e.fixed
ON	OFF	400 lx	ON	OFF	20 flashes per minute
OFF	ON	800 lx	OFF	ON	40 flashes per minute
ON	ON	1600 lx	ON	ON	60 flashes per minute

Factory default setting is all switches in OFF (steady-burning mode without photocell control). Turn-off time in 3 min, turn-on time is 10 sec. When the photocell operation is enabled, the obstruction light turns on when the ambient light level has dropped below selected level for ten seconds. Light turns off when the ambient light level has exceeded the selected value for more than three minutes
